Thane, Mumbai, Maharashtra

SUMMARY

Final-year Computer Engineering student who enjoys building practical, user-focused applications that solve real-world problems. I'm particularly interested in systems that combine intelligent decision-making with seamless user experience. I focus on writing clean, scalable code and continuously improving through building and refining meaningful products.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), React

Backend & Database: Node.js, Express.js, MySQL, MongoDB, Redis (Upstash)

Tools & Platforms: Git, GitHub, Netlify, Vercel, Render

Concepts: REST APIs, Real-Time Systems (Socket.io), AI Integration

Languages: JavaScript, Python

PROJECT

OfferVerify – AI-Powered Job Offer Verification Engine

[LIVE DEMO](#) | [GITHUB](#)

Tech Stack: React, Node.js, Express, MongoDB, Exa AI, Groq (Llama-3), Tailwind CSS

- Engineered a full-stack platform to detect fraudulent job offers by generating a **0-100 trust score** using AI and real-time web intelligence.
- Designed a **Dual-AI validation pipeline**, using Groq Llama-3 to analyze job offer content and Exa AI to cross-verify company legitimacy from live web data.
- Implemented heuristic fraud detection with **explainable flags and reasoning**, achieving high accuracy in identifying fraudulent offers across real-world samples.
- Built a scalable API infrastructure across Vercel and Render, ensuring reliable data flow and secure cross-origin communication.

Architex – Real-Time Collaborative Diagramming System

[LIVE DEMO](#) | [GITHUB](#)

Tech Stack: React, Node.js, Express, Socket.io, Redis (Upstash), Groq AI, Tailwind CSS

- Architected a real-time collaborative diagramming system with **sub-100ms synchronization latency**, enabling smooth multi-user interactions using Socket.io.
- Designed distributed state management using **Upstash Redis**, ensuring consistency and fault tolerance across concurrent clients and server instances.
- Integrated an **AI Architect agent (Groq Llama-3)** to analyze diagrams and provide context-aware system design feedback.
- Optimized performance using event throttling and interpolation, eliminating cursor lag and maintaining responsiveness under high concurrency.

FairSplit - Expense Sharing Platform

[LIVE DEMO](#) | [GITHUB](#)

Tech Stack: React, Tailwind CSS, Node.js, Express, MySQL

- Developed **FairSplit**, a full-stack expense sharing platform enabling groups to track shared expenses and balances in real time.
- Implemented a **Greedy Debt Settlement Algorithm** to reduce settlement transactions and improve efficiency in group expense balancing.
- Built **RESTful APIs** using Node/Express for authentication, group management, and expense processing.
- Designed a responsive React/Tailwind analytics dashboard to visualize group spending patterns.

EDUCATION

B.Tech Computer Engineering, University of Mumbai

Nov 2022 - July 2026

Higher Secondary Certificate(Class XII), CBSE - 77.76%

Apr 2021 - May 2022

Secondary School Certificate(Class X), CBSE - 78.88%

July 2019 - Mar 2020

CERTIFICATIONS & VIRTUAL EXPERIENCE

Skyscanner Front End Software Engineering Job Simulation - March 2026

Skyscanner Software Engineering Job Simulation on Forage - March 2025

Electronic Arts Software Engineering virtual experience program on Forage - February 2025
