SUMMARY

Final-year Computer Engineering student, currently interning as a Frontend Engineer at **EaseHawk** building enterprise **CRM** features in production. I don't build to pad a portfolio – I build because a problem existed and I couldn't leave it unsolved. Every project starts with something I wanted to learn and ends with something real people can use. That gap between curiosity and impact is where I do my best work.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), React

Backend & Database: Node.js, Express.js, MySQL, MongoDB, Redis (Upstash)

Tools & Platforms: Git, GitHub, Netlify, Vercel, Render

Concepts: REST APIs, Real-Time Systems (Socket.io), AI Integration

Languages: JavaScript, Python

EXPERIENCE

EaseHawk – MoxCRM | Frontend Engineering Intern

May 2026 - Present

- Replaced a buggy legacy role assignment system with an **atomic Prisma transaction pipeline**, enforcing a **strict single-role ceiling** per user in production.
- Built a **Founder Exception Gate** in **Next.js API routes** that dynamically provisions admin-level access based on registration payload screening.
- Engineered a **React sidebar firewall** that strips restricted admin portals from the **DOM** based on authenticated user's **active role tier**.
- Developed the **Enterprise Employee Directory** from scratch with **server-side Next.js data hydration** and nested clearance badge rendering across three permission tiers.
- Implemented **relational CSV import pipelines** for multi-tenant data structures, linking Deals and Contacts across **PostgreSQL** tables via **Prisma**.

PROJECT

OfferVerify – AI-Powered Job Offer Verification Engine

[LIVE DEMO](#) | [GITHUB](#)

Tech Stack: React, Node.js, Express, MongoDB, Exa AI, Groq (Llama-3), Tailwind CSS

- Engineered a full-stack platform to detect fraudulent job offers by generating a **0-100 trust score** using AI and real-time web intelligence.
- Designed a **Dual-AI validation pipeline**, using Groq Llama-3 to analyze job offer content and Exa AI to cross-verify company legitimacy from live web data.
- Implemented heuristic fraud detection with **explainable flags and reasoning**, successfully identified real fraudulent offers including the one that personally inspired the project.
- Built a scalable API infrastructure across Vercel and Render, ensuring reliable data flow and secure cross-origin communication.

Architex – Real-Time Collaborative Diagramming System

[LIVE DEMO](#) | [GITHUB](#)

Tech Stack: React, Node.js, Express, Socket.io, Redis (Upstash), Groq AI, Tailwind CSS

- Architected a real-time collaborative diagramming system with **sub-100ms synchronization latency**, enabling smooth multi-user interactions using Socket.io.
- Designed distributed state management using **Upstash Redis**, ensuring consistency and fault tolerance across concurrent clients and server instances.
- Integrated an **AI Architect agent (Groq Llama-3)** to analyze diagrams and provide context-aware system design feedback.

FairShare - Expense Sharing Platform

[LIVE DEMO](#) | [GITHUB](#)

Tech Stack: React, Tailwind CSS, Node.js, Express, MySQL

- Developed a full-stack expense sharing platform with a **Greedy Debt Settlement Algorithm** to minimize settlement transactions across group balances.
- Built **RESTful APIs** with Node/Express and a responsive React/Tailwind dashboard to visualize spending.

EDUCATION

B.Tech Computer Engineering, University of Mumbai

Nov 2022 - July 2026

Higher Secondary Certificate(Class XII), CBSE - 77.76%

Apr 2021 - May2022

Secondary School Certificate(Class X), CBSE - 78.88%

July 2019 - Mar 2020
